EXPERIENCE

Data Engineer – Enterprise Data

Sep. 2025 – Present

Suncor Energy

Calgary, AB

- Lead developer on the LVF (Light Vehicle Fleet) reporting project, owning end-to-end delivery through the full RFO deployment process to provide safety-critical event reporting recognized by senior leadership (SQL)
- Deliver dimensional modeling for the Wenco–MineStar migration, mapping MineStar data to existing Wenco structures to unblock a high-priority enterprise project (SQL)
- Identified an early gap in CAT Data Publish service and drove engagement with Caterpillar to develop an integration plan (SQL, Visual Basic)
- Build and maintain end-to-end data pipelines, dimensional models, and cataloguing for the enterprise data lake and warehouse (SQL, Python)

Data Specialist – Condition Based Monitoring

Oct. 2023 – June 2025

Finning International

Edmonton, AB

- Embedded Finning–NACG resource for CAT Telematics data streaming, analytics, and remote troubleshooting across a fleet of ~400 mining machines
- Exceeded the 95% reporting target and drove ~2.4% week-over-week improvement in reporting up-time through proactive monitoring and maintenance
- Delivered over two dozen successful installations, including post-commissioning software verification to ensure operational readiness
- Partnered with the CAT Digital Operations team and NACG to align on software development and telemetry integration timelines

Technology Support Specialist II – Terrain & MineStar

Mar. 2022 – June 2025

Finning International

Edmonton, AB

- Delivered technical support across database, data processing, and site networking issues for customers running the CAT MineStar suite
- Developed custom SQL reports from CAT proprietary formats (SQL, XML) and integrated them into Power BI dashboards
- Advised customers and colleagues on DB best practices, reinforcing reliability, stability, scalability, and security

EIT – Mine Data Systems & Reporting

May 2020 – Feb. 2022

Suncor Energy

Fort McMurray, AB

- Authored custom GPS point-plane projection algorithms that reduced ETL runtime by ~90% and merged with the short-range plan to deliver accurate, data-driven business value (SQL, SSIS)
- Integrated existing data pipelines and processes into production ETL (SQL, SSIS), and maintained the Mine Dispatch Network at >99.8% availability across 2020–2021
- Supported the shift team with data modeling, data quality, and business-logic translation to identify under performing operations, contributing to a two year consecutive highest achieving shift

Co-op – Mine Data Applications & Services

Sep. 2018 – Aug. 2019

Suncor Energy

Fort McMurray, AB

- Spearheaded a new data-merging process to integrate custom-entry foreign data with the dispatch SQL database, and optimized daily data-entry tasks to save ~1.5 hours per day (SQL, VBA)
- Developed specialized, interactive reporting tools for executives (SQL, Power BI, Visual Studio)

PROJECTS

Self-Hosted Web Platform & Custom Domain | *Linux, Docker, Cloudflare, DNS*

2022 – Present

- Deployed and managed 35+ containerized web applications under a personal domain, orchestrated with Docker and Komodo on a Linux host
- Implemented monitoring and alerting with Beszel and Uptime Kuma, integrating Apprise API to deliver notifications via SMTP and Discord webhooks to achieve >99.9% availability
- Secured public-facing apps using Cloudflare Tunnels as a reverse proxy, with GitHub OAuth and Cloudflare Access policies; configured Cloudflare DNS with Google SMTP for custom email forwarding

EDUCATION

University of Alberta

Edmonton, AB

Bachelor of Applied Science in Mining Engineering Co-op

Sep 2015 – Apr 2020

TECHNICAL SKILLS

Languages: SQL, Python

Core Competencies: Data Pipelines, ETL/ELT, Data Modeling, Data Warehousing, Data Quality

Platforms & Tools: Snowflake, Snowpark, SQL Server, Azure Data Factory, SSIS, Power BI, Git, Docker

Domain: Mining Operations, Fleet Telemetry, Geospatial Data, Mine Dispatch Systems, Condition Based Monitoring
